Leading and building Adeptnova | Driving AI-Powered Backend
Innovation | Cloud, Data & Blockchain | Architecting Scalable
Systems with Python, FastAPI, PostgreSQL & Redis | Scaling
Intelligent Backend Systems

Ahmedabad, Gujarat, India

Summary

From Python to Production: Crafting Scalable, Secure Backend
Systems

Ever since I wrote my first script to automate a mundane task,
I knew technology had the power to simplify the complex—and
I was hooked. Today, I'm a Python Developer who thrives at
the intersection of backend engineering, cloud integration, and
blockchain innovation.

Currently at NextGen Clearing Ltd., I specialize in FastAPI and
cloud-native backend systems that handle massive telecom
datasets. My day-to-day involves building and optimizing APIs,
connecting services across distributed architectures, and making
sure data flows securely and efficiently. I work with PostgreSQL,
Redis, and AWS to architect solutions that don't just function—they
scale.

Previously, I wore the dual hat of Python & Blockchain Developer at
Solvios Technology, where I built smart contracts, custom blockchain
infrastructure, and even led the development of a token-based
marketplace. My AWS-powered Invoice Processing Tool for telecom
billing cut processing times by over 30%.

With certifications in Python, Cloud Computing, and Red Hat System
Administration—and a finalist title at Smart India Hackathon 2022—I
bring not just skills but a track record of results.

I'm passionate about solving real-world problems using clean,
scalable code. Whether it's automating a data pipeline, developing
secure APIs, or collaborating across teams, I bring a builder's
mindset to every challenge.

Let's connect if you're working on innovative backend systems, cloud integration projects, or blockchain use cases. Always open to knowledge-sharing, mentoring, and exciting tech conversations!

Experience

AdeptNova Ltd.

Senior Software Engineer

August 2025 - Present (1 year)

Ahmedabad, Gujarat, India

At AdeptNova India Private Limited, I work as a Senior Software Engineer, building scalable, high-performance systems that combine FastAPI, Artificial Intelligence (AI), and IoT technologies.

My role focuses on designing and integrating AI-powered platforms using Large Language Models (LLMs) and intelligent agents capable of executing context-aware workflows. I architect systems that enable seamless coordination between AI components, microservices, and external APIs while ensuring reliability, security, and performance.

I specialize in AI + IoT integration, developing real-time pipelines that ingest data from IoT sensors and devices, process it through scalable backend services, and apply AI models for monitoring, anomaly detection, and predictive insights.

In supply chain management, I contribute to building intelligent, data-driven solutions by combining IoT-based asset tracking, inventory monitoring, and logistics telemetry with AI-driven demand forecasting, route optimization, and risk analysis. These solutions enhance operational visibility, efficiency, and decision-making.

On the backend, I leverage FastAPI to build secure, low-latency APIs and maintain clean, maintainable architectures. I collaborate closely with cross-functional teams to translate business requirements into impactful, production-ready AI solutions.

My mission is to bridge traditional backend engineering with modern AI and IoT ecosystems, delivering practical and scalable innovations.

Nextgen Clearing Ltd

Python Developer

July 2023 - July 2025 (2 years 1 month)

Ahmedabad, Gujarat, India

At NextGen Clearing, I work as a Python Developer where I specialize in building robust back-end services using FastAPI, PostgreSQL, and Redis. I've played a key role in enhancing application stability by implementing automated testing with PyTest, Mypy, and Flake8, which improved code reliability by 40%. I developed RESTful APIs and integrated third-party services, significantly improving data interoperability across cloud-based systems. By designing optimized data storage solutions and deploying secure data access protocols using Keycloak, I helped reduce data latency and ensured compliance with industry security standards. I actively contribute to architectural decisions, improving scalability for high-volume telecom data platforms. My focus remains on improving cloud integrations using AWS and reducing data processing time by leveraging caching strategies and asynchronous programming.

Solvios Technology

2 years 10 months

Python / Blockchain Developer

August 2022 - June 2023 (11 months)

Ahmedabad, Gujarat, India

At Solvios Technology, I led several high-impact projects combining Python backend development with blockchain integrations. I developed a telecom Invoice Processing Tool using AWS services and Python, reducing manual effort by 60% and cutting processing time by 35%. I also created a token-based marketplace using Solidity, enabling fractional asset ownership and driving new revenue streams. My work on custom blockchain development and smart contract implementation directly supported business use cases in logistics and identity verification. Additionally, I spearheaded automation testing using Selenium, identifying bugs and improving platform stability. I regularly collaborated with clients, ensuring seamless communication and timely delivery of products. Security and data integrity were at the forefront of my contributions, and I consistently implemented secure coding practices that aligned with client compliance requirements.

Python Developer

May 2021 - July 2022 (1 year 3 months)

Ahmedabad, Gujarat, India

Information Technology Intern

September 2020 - April 2021 (8 months)

Ahmadabad, Gujarat, India

Education

Indian Institute of Technology, Madras

Advance Data Science Certificate Program, Data Science · (September 2023 - June 2024)

University of Toronto - Rotman School of Management

Advance Data Science Certificate Program, Data Science · (September 2023 - June 2024)

GLS University

Master of Science - MSC, Information Technology · (June 2021 - April 2023)

GLS University

Bachelors of Science, Information Technology · (June 2018 - April 2021)

IANAT (Institute of Advance Network Technology)

CSP , CERTIFIED SOFTWARE PROGRAMMRE · (2017 - 2020)
